Proven Technical Expertise

A trusted technology partner backed by industry-recognized certifications and strategic partnerships across key IT disciplines.

ABOUT SKYTECH

Who We Are?

SKYTECH is a Microsoft Solutions Partner and multi-cloud systems integrator delivering enterprise-grade cloud and hybrid transformation, Zero Trust cybersecurity, and AI enablement to regulated organisations across the GCC, Africa, UK, and USA.

We design and operate secure identity, workload, and data architectures across the full Microsoft estate — on-premises, hybrid, and cloud alongside AWS and Oracle, reducing risk, satisfying regulatory mandates, and producing measurable ROI that lets leadership teams modernise with confidence.

WHO WE STAND FOR

Vision, Mission & Values

At SKYTECH, we believe secure transformation is a leadership outcome, not just a technical one. We partner with executive teams in regulated industries to modernise with confidence embedding governance, resilience, and measurable value into every engagement.

Our Vision

To be the most trusted technology partner for enterprise organisations across the GCC, Africa, UK, and USA enabling secure, intelligent, resilient transformation at scale.

Our Mission

Empower executive teams to achieve transformational outcomes through enterprise cybersecurity, cloud modernisation, AI enablement, and enterprise technology leadership.

Security First

Risk, governance, and protection designed into every solution from day one not bolted on afterwards.

CORE VALUES

Integrity

Clear accountability and ethical decision-making.

Innovation

Practical technology applied with purpose.

Excellence

Enterprise-grade delivery with measurable outcomes.

Client Focus

Trusted, long-term executive partnerships.

Our Areas of Expertise

Cloud Infrastructure & Modernisation

Multi-cloud & hybrid architecture across Azure, AWS & OCI landing zones, Azure Arc, Azure Local (Stack HCI), migration, FinOps & cloud-native design.

Microsoft 365 & Modern Workplace

Microsoft 365, Entra ID, Intune & Conditional Access with hybrid Exchange Server SE, SharePoint Server SE, AD DS & Windows Server.

Cybersecurity & Security Operations

Zero Trust, identity security (cloud & on-prem AD), SIEM/SOAR and managed SOC across Microsoft Sentinel, Defender XDR, Defender for Identity and CrowdStrike.

AI Enablement & Automation

Agentic AI, RAG and copilots, workflow automation, and AI governance across Copilot, OpenAI, Claude and self-hosted models.

Data, Power Platform & ERP

ERP and CRM (Odoo & business apps), and low-code app delivery.

Managed IT, Backup & Governance

ITIL service desk, BCDR, compliance, and 24x7 monitoring across cloud and on-prem.

Cloud Infrastructure & Modernisation

Secure, Scalable Cloud Foundations for Modern Enterprises

Scalable Infrastructure

Cloud-native hosting that grows with demand.

Cost-Optimised

FinOps governance and full spend visibility.

Resilient by Design

Multi-region business continuity built in.

Enterprise cloud demands well-architected, secure foundations. We design and migrate workloads with governance and cost control embedded from day one across Azure, on-prem Hyper-V / Windows Server, and Azure Arc-managed hybrid estates.

Migrate

Move workloads safely and securely

Scale

Flexible cloud that grows with you

Govern

Control cost, posture & compliance

SOLUTIONS

Multi-cloud strategy,
vendor selection &
FinOps governance

05 | Governance
policy set

Microsoft Modern Workplace

One Microsoft workplace datacenter to cloud, Zero Trust by default

Modern Collaboration

Collaboration, On-Prem to Cloud
Exchange Server SE & Online,
SharePoint Server SE & Online,
Teams.

Hybrid Identity & Endpoints

AD DS + Entra ID (Entra Connect);
Intune + Configuration Manager
co-management.

Zero Trust Access

Conditional Access & Global
Secure Access enforced
everywhere.

The modern workplace spans on-prem and cloud. We deploy and govern the full Microsoft estate – Exchange & SharePoint Server SE, Active Directory, Windows Server, M365 and Intune – as one identity- and device-centric platform, with Zero Trust enforced by default.

Connect

Work anywhere,
securely

Protect

Identity- & device-led
control

Operate

Governed, low-friction
admin

SOLUTIONS

Enterprise M365 deployment & governance	Exchange Server SE / Online & SharePoint Server SE / Online architecture & hybrid
Tenant-to-tenant migration & consolidation	Intune + Configuration Manager co-management (Win / macOS / iOS)
Hybrid identity (AD DS, Entra Connect) & Conditional Access	Autopilot provisioning · BYOD & app-level data protection

Deliverables

Assess

Assess existing environment, risks, and gaps

Design

Design optimized systems and infrastructure

Migrate

Transfer data and applications securely

Harden

Harden infrastructure for stronger security

Operate

Operate systems with reliability and control

What You Receive

- 01

Tenant & hybrid identity design baseline
- 02

Migration & cutover plan with validation
- 03

Conditional Access & compliance policy set
- 04

CIS-aligned endpoint baseline
- 05

Admin handover & runbooks

Cybersecurity & Security Operations

Layered, Zero Trust Protection for Regulated Enterprises

Reduce Risk

Stop threats before they impact operations.

Protect Identity & Data

Secure access, email and endpoints

Stay Audit-Ready

Continuous compliance and hardening.

Modern threats target identity and access layers. We implement layered controls — mapped to MITRE ATT&CK — across network, endpoint, and identity, spanning Entra ID and on-prem Active Directory, AD CS and AD FS.

FORTINET

proofpoint.

Protect

Protect data, systems, and users

Monitor

Detect before impact, prevent damage.

Respond

Contain & recover fast, reduce impact

SOLUTIONS

Zero Trust architecture strategy & roadmap	Identity security — Entra ID + on-prem AD DS / AD CS / AD FS, PIM, passwordless MFA
Microsoft Defender XDR + Defender for Identity (Endpoint, O365, Cloud Apps, on-prem AD)	Microsoft Sentinel SIEM/SOAR — detection engineering & automation
SOC design/build, MDR, threat hunting & DFIR	Network & perimeter security (NGFW, micro-segmentation, ZTNA)

Deliverables

Assess

Assess security posture and operational risks

Design

Design scalable and secure technology frameworks

Implement

Implement designed architectures into production

Validate

Validate systems for accuracy and reliability

Maintain

Maintain systems for performance and reliability

What You Receive

- 01

Security posture summary (risks + priorities, ATT&CK-mapped)
- 02

Zero Trust roadmap, built for modern security
- 03

Configured detection layers (XDR + Sentinel)
- 04

Custom analytics rules & playbooks
- 05

IR support path & executive reporting

AI Enablement & Automation

Enterprise AI — Governed, Secure, and Outcome-Driven

Copilot at Scale

M365 Copilot deployment & adoption.

Agentic Automation

Autonomous workflows & custom agents.

UAE/GCC data residency

self-hosted / on-prem RAG for residency-bound data.

AI value requires data readiness and governance. We move organisations from disconnected pilots to governed, production-grade AI.

 Copilot	 OpenAI	
 Claude	 Ollama	 n8n

 Discover Find high-value use cases	 Build Pilots that ship, deliver real impact	 Govern Guardrails, security & compliance
---	--	---

SOLUTIONS

Enterprise AI strategy & operating model	Microsoft 365 Copilot deployment & governance
Agentic AI design & autonomous workflows	Copilot Studio, Azure AI Foundry
Intelligent process automation, powered by AI	AI governance & compliance frameworks (UAE/GCC data-residency controls)

Deliverables

Discover

Identify high-value AI use cases and data readiness

Design

Design the AI architecture, retrieval, and guardrails

Pilot

Build a production-grade pilot, validated before scale

Govern

Govern models, data residency, and compliance

Scale

Scale from pilot to enterprise-wide adoption

What You Receive

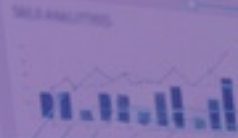

- | | |
|--|--|
| 01 AI readiness & data-architecture assessment | 02 Use-case prioritisation matrix |
| 03 Pilot / PoC build, validate before scale | 04 Guardrails & governance framework |
| 05 Adoption & enablement plan | |

odoo

Data, Power Platform & ERP

From Data to Decisions — and the Applications that Run the Business

Unified Data

SQL Server & Azure SQL, Microsoft Fabric & modern data architecture.

Low-Code Delivery

Power Apps, Automate & Dataverse.

ERP that Fits

Odoo & business apps mapped to your process.

We turn fragmented data into governed intelligence — and build the applications that operationalise it end-to-end.

Architect

Modern, governed data

Build

Custom Apps & Reporting Dashboards

Integrate

Connect systems across the enterprise

SOLUTIONS

SQL Server (on-prem) & Azure SQL, Microsoft Fabric	SQL Server estate — Always On HA/DR, migration to Azure SQL / Arc-enabled SQL
Power Platform governance & Centre of Excellence	ERP strategy, implementation & custom module development (Odoo & business apps)
Third-party / API integration, seamless connectivity	Legacy ERP migration & platform modernisation

Deliverables

Assess

Assess operational risks and control gaps

Architect

Architect cloud-first IT environments

Build

Build modern enterprise applications

Integrate

Integrate enterprise platforms seamlessly

Support

Support operations with reliable service delivery

What You Receive

Managed IT, Backup & Governance

Proactive IT Operations for Business Continuity

Reduced Downtime

Preventive monitoring & maintenance.

Always Recoverable

Immutable backup & tested BCDR.

Audit-Ready Governance

Purview compliance & DLP, secure by design

Stable operations need structured support and proven recoverability. We run your IT estate to SLA – across cloud and on-prem (Windows Server, Hyper-V, Configuration Manager, Azure Arc) with Azure Backup / Site Recovery – continuity assured.

NAKIVO®

ManageEngine

freshworks

Purview

Support

Fast, SLA-backed helpdesk

Maintain

Healthy, predictable systems

Advise

Smarter IT decisions, act with clarity

SOLUTIONS

IT service management, ITIL & SLA-backed service desk	Config & patch mgmt — Configuration Manager, WSUS / Azure Update Manager, Azure Arc
Microsoft 365 backup & long-term retention	Ransomware-resilient immutable backup & BCDR (Windows Server, Hyper-V, SQL)
Microsoft Purview governance, DLP & compliance	Network performance monitoring & optimization

Deliverables

Assess

Assess operational risks and control gaps

Monitor

Monitor systems and respond to incidents 24x7

Maintain

Maintain patching, backups, and system health

Recover

Recover fast with tested BCDR and immutable backup

Report

Report on health, SLAs, and RTO/RPO governance

What You Receive

- 01

Monthly/quarterly health summary
- 02

Asset & subscription visibility
- 03

Patch & backup verification
- 04

RTO/RPO governance reporting
- 05

Improvement roadmap, evolve with purpose

Why Choose SKYTECH?

01

Proven Microsoft, Cloud & Security Expertise

Deep, certified capability across Microsoft, multi-cloud, and security platforms.

02

Certified Engineers, Hands-On Experience

Expert-level delivery in regulated environments.

03

Security-First Design Framework

Zero Trust and least privilege embedded across every solution.

04

End-to-End Implementation & Support

From strategy and design through delivery and managed operations.

05

Customised Cloud & Security Strategies

Architectures tailored to GCC regulatory and business context.

06

Transparent, Long-Term Partnership

Executive-level engagement built on trust and accountability.
